D&B DUNS REGISTERED™
WITH TOP RATING
30 countries to launch 5G services in 2023

New figures from mobile industry forecaster GSMA Intelligence show 5G connections are expected to double over the next two years, expedited by technological innovations and new 5G network deployments in more than 30 countries in 2023 alone.

Of the new networks to be deployed in 2023, it is expected that 15 will be 5G Standalone networks.

The forecasts from GSMA Intelligence point to a significant period of growth in terms of mobile subscribers and enterprise adoption. Consumer connections surpassed one billion at the end of 2022 and will increase to around 1.5 billion this year – before reaching two billion by the end 2025. This momentum confirms 5G as the fastest generational roll-out, when compared to 3G and 4G.

As of January 2023, there were 229 commercial 5G networks globally and more than 700 5G smartphone models available to users.

Opening up in emerging markets

Growth will also come from key markets within APAC and LATAM, such as Brazil and India, which have recently launched 5G networks. India will be especially significant, with the expansion of services from Airtel and Jio in 2023 expected to be pivotal to the region’s ongoing adoption. GSMA Intelligence predicts there will be four 5G networks in India by the end of 2025, accounting for 145 million additional users.

Many of the new 5G markets scheduled to launch networks in 2023 are in developing regions across Africa – including Ethiopia and Ghana – and Asia. Today, 5G adoption in the sub-Saharan region sits below 1% but will reach over 4% by 2025 and 16% in 2030, largely thanks to a concerted effort from industry and government organisations to provide connectivity to citizens.

"Until now, 5G adoption has been driven by relatively mature markets and consumer use cases like enhanced mobile broadband, but that's changing. We're now entering a second wave for 5G that will see the technology engage a diverse set of new markets and audiences," said Peter Jarich, Head of GSMA Intelligence. "The extension to new use cases and markets will challenge the mobile ecosystem to prove that 5G truly is flexible enough to meet these diverse demands in a way that's both inclusive and innovative."
The Rise of 5G FWA (Fixed Wireless Access)

As of January 2023, more than 90 fixed broadband service providers (the vast majority of which are mobile operators) had launched commercial 5G-based fixed wireless services across over 48 countries. This means around 40% of 5G commercial mobile launches worldwide currently include an FWA offering.

In the US, T-Mobile added over half a million 5G FWA customers in Q4 2021 and Q1 2022 combined. By 2025, it expects to have eight million FWA subscribers, while Verizon is targeting five million FWA subscribers for the same period. And, with operators such as Jio announcing ambitions to connect as many as 100 million homes across India to its 5G FWA network, the number of FWA users looks likely to grow substantially over the next few years.

While the majority of current 5G FWA deployments focus on the 3.5–3.8 GHz bands, several operators around the world are already using 5G mmWave spectrum as a capacity and performance booster to complement coverage provided by lower bands.

Only 7% of 5G launches have been in 5G mmWave spectrum so far but this looks set to change given 27% of spectrum allocations and 35% of trials are already using 5G mmWave bands. Furthermore, in 2023 alone, the industry will see ten more countries assigned 5G mmWave spectrum for use – a significant increase from the 22 countries who have been assigned it to date.

Spain received the first European 5G mmWave spectrum allocation this year, resulting in Telefónica, Ericsson and Qualcomm launching its first commercial 5G mmWave network at MWC Barcelona 2023.

Enterprise IoT Driving Growth

The figures from GSMA Intelligence also suggest that, for operators, the enterprise market will be the main driver of 5G revenue growth over the next decade. Revenues from business customers already represent around 30% of total revenues on average for major operators, with further potential as enterprise digitisation scales. Edge computing and IoT technology presents further opportunities for 5G, with 12% of operators having already launched private wireless solutions – a figure that will grow with a wider range of expected IoT deployments in 2023.

Another major development for the enterprise market will be the commercial availability of 5G Advanced in 2025. Focusing on uplink technology, 5G Advanced will improve speed, coverage, mobility and power efficiency – and support a new wave of business opportunities. GSMA’s Network Transformation survey showed half of operators expect to support 5G Advanced commercial networks within two years of its launch. While this is likely optimistic, it presents the ecosystem with a clear opportunity to execute on.

The New Motorola Edge 40 Pro: flawless design meets unbounded performance, and the more affordable Edge 40

With the Motorola Edge 40 Pro, Motorola has once again made its Pro handset a true Android flagship. The company has packed in all the de rigueur trappings of a flagship phone — so you’re getting the best processor, all the latest connectivity standards, nicer materials, and the like.

In Europe, the Edge 40 Pro is 899.99 euro, or about US$982, so this phone needs to be on par with the best Android phones out there. The specs are close, with a Qualcomm Snapdragon 8 Gen 2, 12GB of RAM, and 256GB of UFS 4.0 storage. The OLED display has a unique stat line of 165 Hz with a 2400×1080 resolution—typically flagships have a 120 Hz display at 1440p. The battery is smaller than expected at 4600 mAh, when most phones pack in 5000 mAh at this size.

It has IP68 dust and water resistance, Android 13, WiFi 7 support, NFC, an in-screen fingerprint reader, and 15 W wireless charging. One standout is the 125 W wired charging, which Motorola says will charge the phone in 23 minutes. For cameras, Motorola has included a “triple high-res camera system,” which includes a 50 MP main camera, a wide-angle camera, and a 12 MP 2x telephoto camera on the back; the front has a 60 MP selfie camera.

A lot of phones approach stereo speakers with one speaker on the bottom edge of the phone and then the earpiece doubling as a top speaker, but Motorola went the unique route of having a speaker cutout on the top edge of the

phone, just like the bottom. Besides that, not much sets the
design apart, and it's barely distinguishable from the pile of
mid-rangers Motorola pumps out every few months. It has
a curved screen, metal frame, glass front and back—all the
usual stuff.
Motorola also introduce a more affordable, non-Pro variant
called the Motorola Edge 40. It is 599.99 euro or about
US$664. As you'd expect, the Edge 40 features slightly
downgraded specs across the board compared to the Pro.
Its 1080p OLED screen is slightly smaller at 6.55 inches
versus 6.67 inches, and it's also got a lower 144Hz refresh
rate compared to 165Hz, but that's unlikely to be noticeable
in practice. The Edge 40 is also powered by a MediaTek
Dimensity 8020 processor rather than the Pro's Snapdragon
8 Gen 2, and a slightly smaller 4,400mAh battery.
Following the lead of most other smartphone brands, the
non-Pro Edge 40 also drops the third telephoto camera of its
more expensive sibling, and what's left is also lower-
resolution. The Edge 40 has a main 50-megapixel camera
with optical image stabilization, a 13-megapixel ultrawide
with a macro mode and 120 degree field of view, and a
32-megapixel selfie camera.
Elsewhere the Edge 40 has maintained a few nice to have
features. Sure, its fast charging is almost half that of the
European Pro model, but it's still a speedy 68W that offers
up to 12 hours of battery life from 10 minutes of charging.
There's also an IP58 rating for dust and water resistance,
up to 15W wireless charging, and dual stereo speakers.
Available colors include acrylic blue, and vegan leather green
or black.

China Telecom's Number of 5G Package Users Increases 5.03 Million in March

China Telecom recently released its major operational data for March 2023. In the month, the number of its mobile phone users increased by a net of 2.99 million, with cumulative mobile phone users totaling 398.7 million. Among them, the number of net increase of 5G package users was 5.03 million, and the cumulative number of 5G package users reached 283.21 million.

In the first quarter of 2023, the number of China Telecom’s mobile phone users increased by a net of 7.52 million, reaching a cumulative total of 398.7 million users. Net increase of 5G package users reached the number of 15.25 million, with a cumulative total of 283.21 million users and a penetration rate of 71.0%.

As for its wired broadband business, China Telecom’s users increased by a net number of 1.12 million per month, with a cumulative number of 184 million. In terms of fixed telephone business, the number of net decrease of China Telecom’s fixed telephone users was 300,000 per month, with a cumulative total of 104.04 million households.

In the first quarter of 2023, China Telecom’s wired broadband users increased by a net number of 3.1 million, reaching a cumulative total of 184 million households.

Samsung might replace Google with Bing on its phones

According to the rumors, Samsung is negotiating with Microsoft to replace Google Search with Bing on its mobile phones.

Samsung is reportedly considering switching its search engine on its phones, Google Search, with Microsoft’s Bing.

According to the claims, the reason behind this is the new artificial intelligence features that are added to the Bing search engine.

Samsung’s negotiations with Google and Microsoft are yet to be completed; the company might still change its decision.

According to the New York Times’ claims, Google was earning approximately $3 billion annually through its search engine deal with Samsung; the company is told to be in a panic situation about losing Samsung to its biggest competitor, Bing. The biggest reason for Samsung’s consideration of switching to Bing is the artificial intelligence integration of the search engine. Bing currently utilizes OpenAI’s GPT artificial intelligence for more advanced features.

Samsung’s negotiations with Google and Microsoft are ongoing, which means if those claims are valid, Samsung might still decide to continue using Google.

Microsoft is pushing hard to implement artificial intelligence features in almost all of its products. The company recently announced that OneNote will be enhanced with Microsoft 365 CoPilot alongside other office products.

Google, on the other hand, is a little late to the artificial intelligence party. However, it is also working on several AI projects, including an AI image generator named GFi, a language-teaching AI named Tivoli Tutors, and some others.

Google can create the perfect Pixel phone — if it changes one thing

A new Google Pixel A-series has launched, and it’s sure to make reasonably priced phones quiet in their boots. The Google Pixel 7a introduces new features for the A-series, including a 90Hz refresh rate, the highest megapixel count ever on a midrange Google phone, and the Tensor G2 processor. It’s a solid smartphone, and it puts up a good fight against a number of similar devices — including the Samsung Galaxy A54 and even the flagship Google Pixel 7.

But the fact that it’s able to stand up against its flagship brethren highlights a concern — the price. The Pixel 7a costs $499, which is only $100 away from the Pixel 7. That small disparity means there’s a big gap underneath the Pixel 7a for another phone. The $349 Pixel 6a helps to fill some of that gap, but it’s not

Samsung Unveils World's First OLED Display With Built-In Fingerprint and Blood Pressure Sensing

Samsung Display has unveiled a new generation of OLED panels that it says can recognize fingerprints anywhere on the screen and even check the user's heart rate, blood pressure, and stress levels using multiple simultaneous finger readings.

Usually, fingerprint sensors in smartphones are attached under the display panel as a separate module and are only sensitive to fingerprint data within a limited portion of the screen. By contrast, Samsung's new "Sensor OLED Display" extends this sensitivity to the entire screen by embedding a light-sensing organic photodiode (OPD) into the panel itself.

The technology currently being shown off at SID Display Week 2023 opens up some exciting possibilities for future smartphones, such as multi-finger authentication (putting four fingers on the display, for example), which could offer several thousand million times stronger security than a single finger.

Another potential feature could be the ability to authenticate individual apps on a phone's Home Screen simply by placing a finger on the app icon to open it, replacing the need for a passcode or facial authentication.

But perhaps the most intriguing claim being made is the ability of the Sensor OLED Display to check cardiovascular health, including blood pressure when two fingers are used.

"To accurately measure a person's blood pressure, it is necessary to measure the blood pressure of both arms," notes Samsung Display's press release. "The Sensor OLED display can simultaneously sense the fingers of both hands, providing more accurate health information than existing wearable devices."

Samsung says the system works because OLED light is reflected differently depending on the contraction and relaxation of the blood vessels inside the finger, and when it returns to the panel, the OPD is able to recognize it and converts it into a blood pressure reading.

Samsung did not provide information on the accuracy rate or speed of its Sensor OLED display, nor did it explain whether the authentication and biometric readings could be taken at the same time, but the company clearly has confidence that the technology is destined for smartphones in the near future.

Could it or something similar one day appear in an iPhone? It's no secret that Apple has been working on a Touch ID system designed to be set under the display since at least 2013, with several patents awarded to the company over the years. Indeed, despite claims that under-screen Touch ID on a future iPhone is unlikely, Apple has, if anything, intensified its research in under-screen fingerprint sensing technology.

Earlier this year, Apple was granted a patent relating to under-screen Touch ID that combines software infrared technology with an optical imaging system that could have multiple functions. Not only does the latest embodiment aim to read the user's fingerprint when it touches the display, it could also determine vein pattern, blood oxygenation, pulse, and the presence of gloves and wetness.

At this point, we can't be certain that Apple will ever put Touch ID under iPhone screens. There also remains a possibility that Apple instead introduces an iPhone with Touch ID built into a physical side button, in line with the latest iPad Air and iPad mini models, although there haven't been any rumors to suggest that Apple plans to follow that route.

Apple's roadmap for under-panel technology, as outlined by DSCC industry consultant Ross Young, suggests we're unlikely to see an under-screen version of Touch ID in an iPhone anytime soon. Apple appears to be more focused on moving Face ID and the front-facing camera under the display, both of which it aims to achieve by 2027.

Mobile phone users reach nearly 184 mn in Bangladesh

The total number of Bangladesh’s mobile phone users is close to nearly 184 million at the end of March this year, showed the latest statistics of the country’s telecom regulator.

According to data from the Bangladesh Telecommunication Regulatory Commission (BTRC), the number of subscribers in the South Asian country reached 183.89 million in March.

The number stood at 180.20 million at the end of December 2022.

Currently, Bangladesh has four mobile companies, three of which are foreign-backed cell phone operators.

The number of subscribers of mobile operators, Grameen Phone, Robi Axiata, Banglalink Digital Communications and Teletalk Bangladesh, stood at 80.30 million, 55.57 million, 41.39 million and 6.63 million respectively at the end of March, the data showed.

Pakistan’s mobile phone imports decline 66 pct in first half of FY 2023

According to the Xinhua report, Pakistan’s mobile phone imports declined by 66 percent in the first half of the current fiscal year 2022-2023, compared to the same period of the last fiscal year, according to figures from the Pakistan Bureau of Statistics (PBS).

The mobile phone imports into the country were recorded at 362.86 million U.S. dollars in July-December of the ongoing fiscal year as against the imports of 1,090.64 million dollars during the same months of fiscal year 2021-22, showing a decline of 66.73 percent, the PBS figures showed on Sunday.

Meanwhile, on the year-to-year basis, the import of mobile phones also dipped by 69.1 percent during the month of December 2022 when compared to the same month of last year, the PBS said.

However, on the month-on-month basis, the imports of mobile phones witnessed an increase of 12.04 percent during December 2022, as compared to the imports of 64.52 million U.S. dollars during November 2022, according to the PBS data.
